

A PhD stipend from the University of Queensland is available on an ARC Linkage grant entitled 'Next-generation technology for determining fitness-for-use of starches in cereal grains'. The PhD involves the polymer science linking state-of-the-art characterization of the size distribution functions describing starch (from multi-detection SEC and field-flow fractionation) with fitness-in-use criteria currently used in the Australian grain industry.

Please contact Professor Bob Gilbert (07 3365 4809, b.gilbert@uq.edu.au) for more information.
